

ART, GEOMETRY, AND COGNITION

Entering Las Meninas

How a Painting Changed the Way I Look at Art

Zhuang Chengbo · Final Project · Summer 2026

UC Berkeley

OPEN WITH: Where am I standing when I look at a painting?

Why Las Meninas?

“It did not let me remain outside the scene.”

- The painter and the large canvas block a complete view.
- The mirror and rear doorway open the room beyond itself.
- Outward gazes make the viewer part of the

LOOKING BECAME PARTICIPATION.

Tether: a ready-made self-portrait

An ordinary object

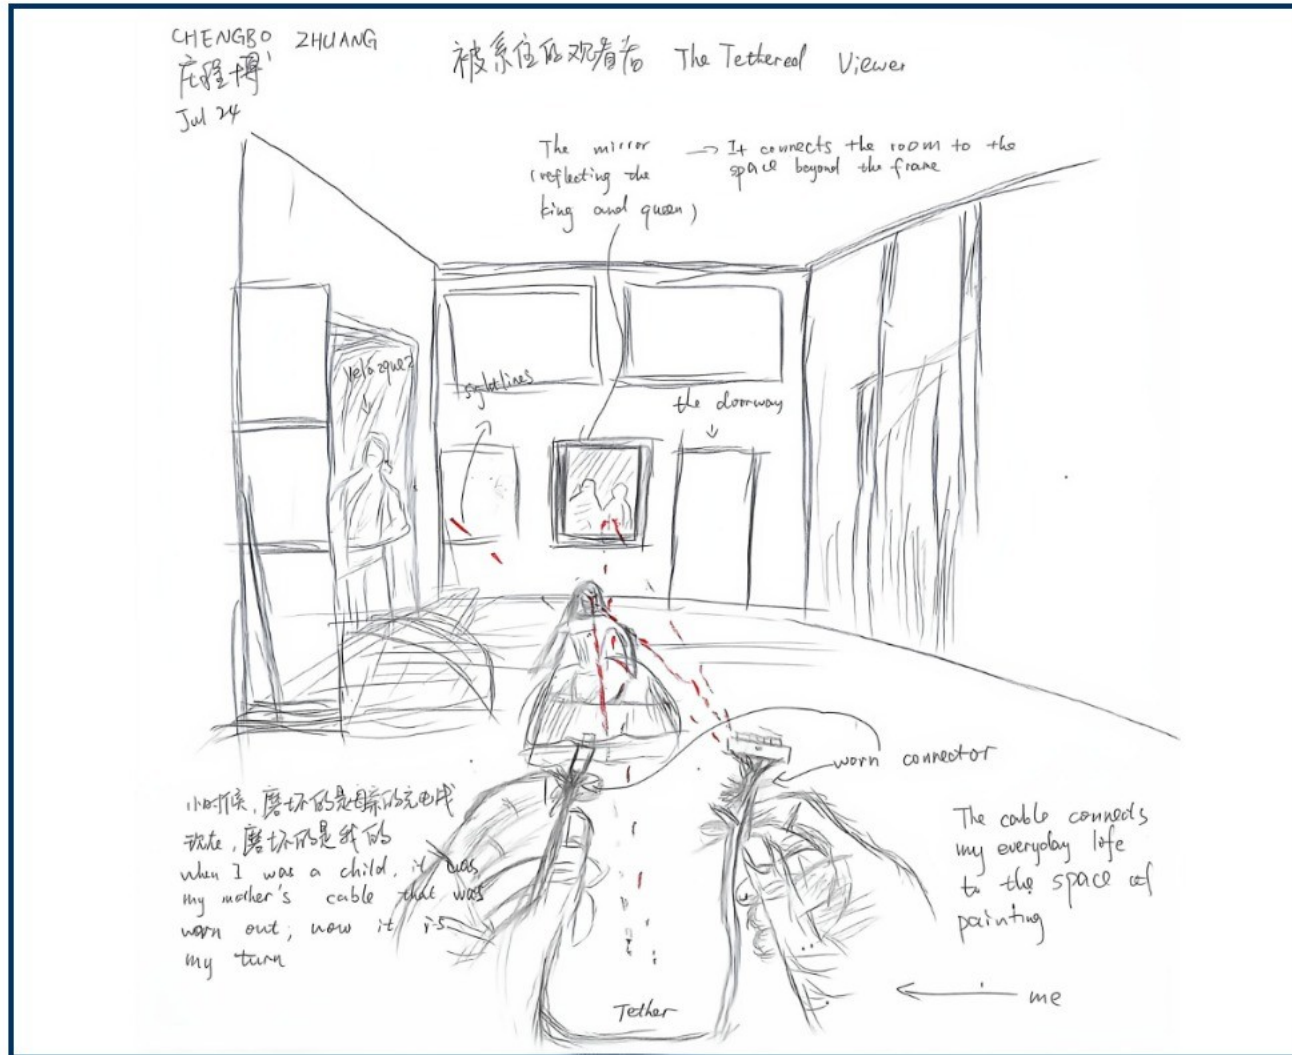

- Came with my first university Mac
- Both ends frayed within one year
- Its wear records where I stood: before a screen

SELECTION + CONTEXT = MEANING

The Tethered Viewer

- A room derived from Las Meninas
- My hands occupy the foreground
- The red tether crosses the picture's depth

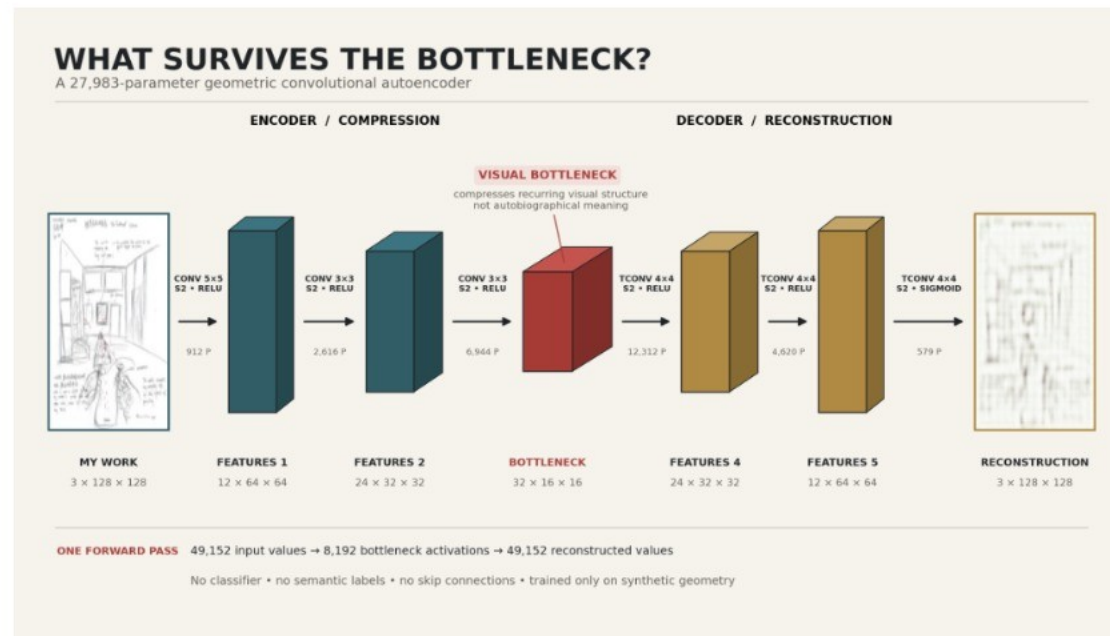

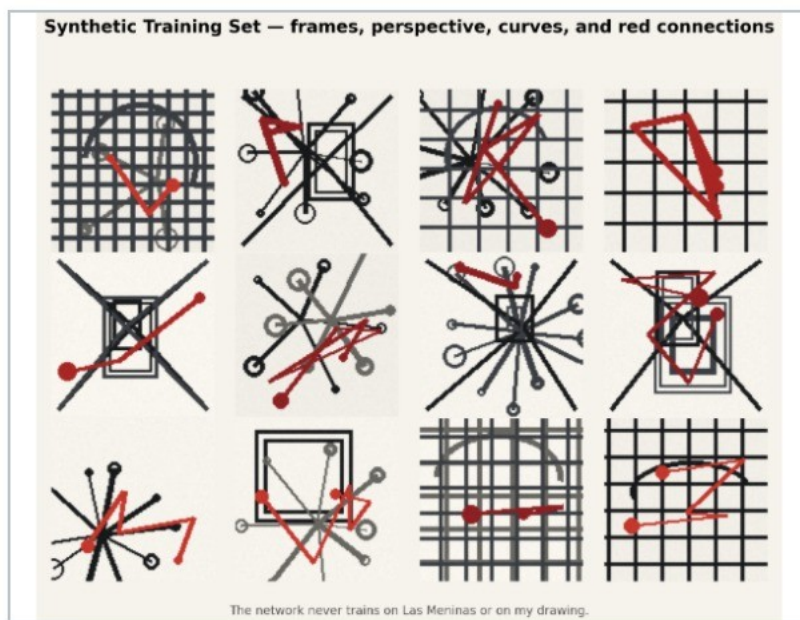

childhood → university
viewer → painting
object → digital life

A deliberately small neural experiment

GEOMETRIC TRAINING VOCABULARY

ENCODER → BOTTLENECK → DECODER

800
synthetic patterns

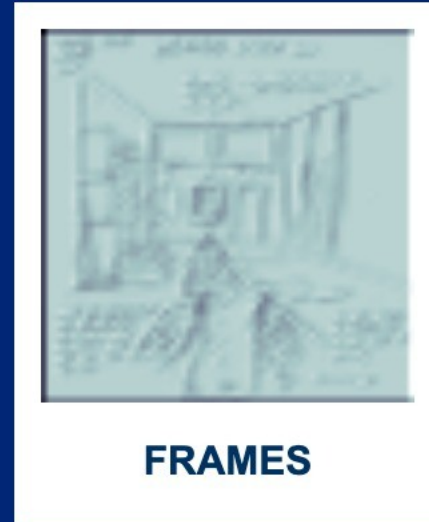

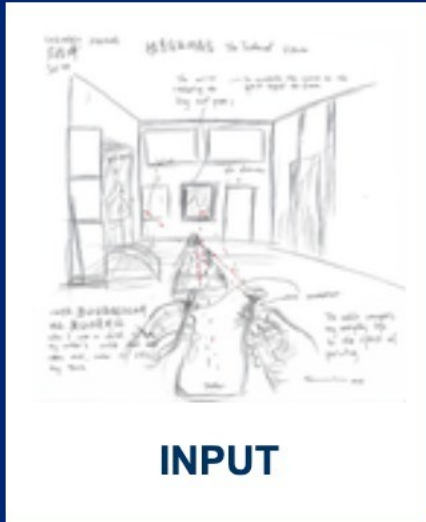

27,983
parameters

128 × 128
input

18 epochs
MSE objective

Early maps separate visual tendencies

12 × 64 × 64

12 channels ≠ 12 meanings
The filters respond to structure, not to my story.

What survives compression?

INPUT · 49,152 VALUES

BOTTLENECK · $32 \times 16 \times 16$
8,192 VALUES

RECONSTRUCTION

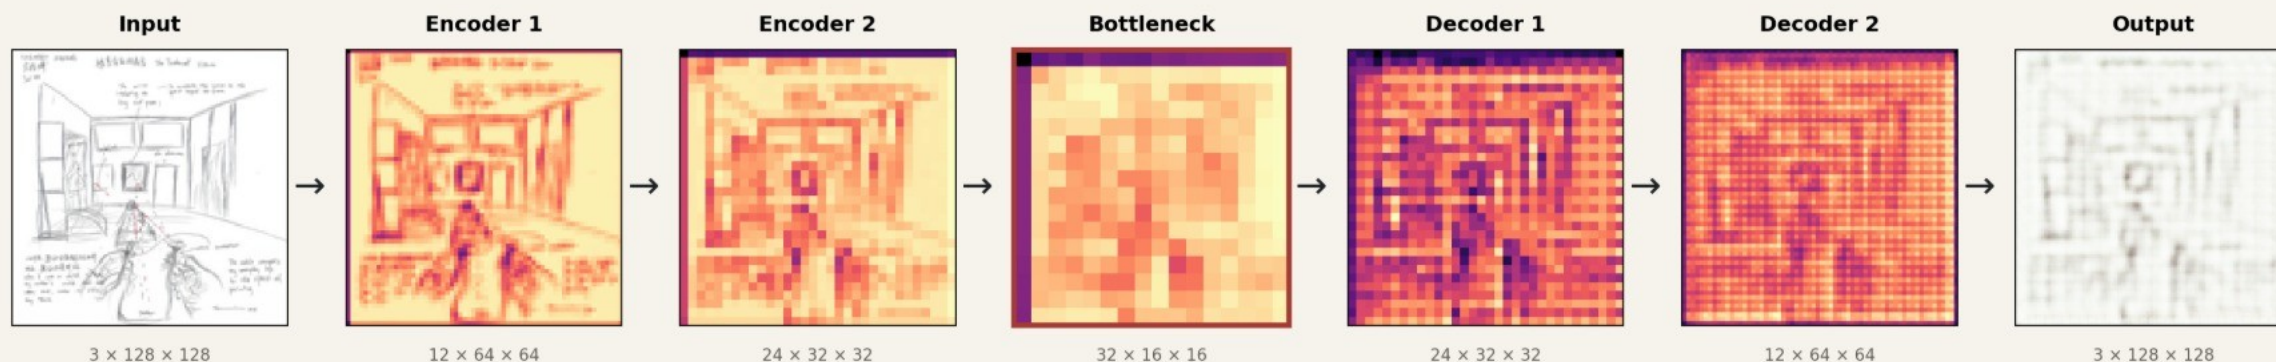

PRESERVED frames · openings · diagonals ·
approximate figures

DISCARDED handwriting · faces · exact red tether

Decoder: expansion is not recovery

128^2 INPUT $\rightarrow 64^2 \rightarrow 32^2 \rightarrow 16^2$ BOTTLENECK $\rightarrow 32^2 \rightarrow 64^2 \rightarrow 128^2$ OUTPUT

The Tethered Viewer — one real forward pass through every scale

RECOVERED

Room frame · central rectangle
approximate figures · major directions

NOT RECOVERED

Handwriting · faces · fine detail
exact shape of the red tether

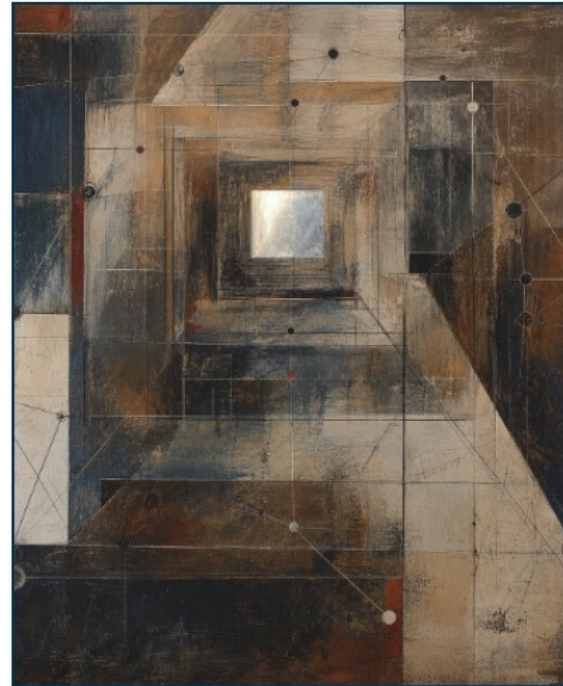

MSE 0.003884
MAE 0.048645

Making the geometry of looking visible

CONTENT · LAS MENINAS

STYLE · COGNITIVE MAP

FINAL STYLE-TRANSFER COMPOSITION

figures + room → planes + nodes + convergence

A four-second step inward

HOW IT WAS MADE

- heuristic vertical depth field
- smooth sine/cosine camera loop
- depth-weighted pixel remapping

WHY IT FEELS IMMERSIVE

Foreground drift + a stable doorway create parallax and layered depth.

Every way of seeing has a bottleneck.
